DETAILED ACTION

Drawings

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference sign(s) not mentioned in the description: "1a", "1b", and "6a". A proposed drawing correction, corrected drawings, or amendment to the specification to add the reference sign(s) in the description, are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 10 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 10 is not clearly understood since "the operating means" lacks clear antecedent basis.

It is unclear if "the operating means" is referring to the "operating system" of claims 5 and 6.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3612

5. Claims 1-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Bernardo (5,350,213).

Bernardo discloses a mounting system for a motor vehicle, shown in Figure 5. The mounting system is composed of at least one locking device with at least two locks (56). The locks move independently in opposite directions in chambers (80) that act as guides. Lock set handle (36) is a rotary operating element used to control locking. Bars (38) block motion of the locks (56). The lock extends through a side face of slat (30) and is tensioned by spring (98). The locks can be automatically controlled. The position of lock set handle (36) indicates the locking condition of the system, as seen in Figures 8 and 9.
